

When we measure angles using the protractor, we should remember the following steps.

Step 1: Place the center of the protractor at the vertex of the angle.

Step 2: Make sure that one of the horizontal line is along one of the arm of the angle.

Step 3: Slowly move your eyes from the zero of the protractor which is along the line in step 2.

Step 4: Look for the angle measure which coincide with the other arm of the angle drawn. This will give the exact measure of the angle.

Geometry- Angle Measurement

Measure the following angles.
