

Accurately graph the parabola. State the vertex, domain, range, axis of symmetry, “a” value, and direction.

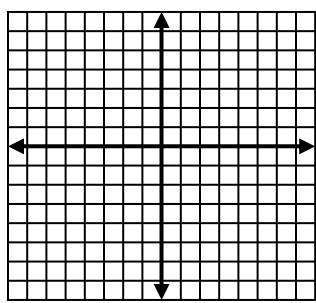

1.  $x = -(y - 2)^2 + 1$

x | y

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) “a” value
- f) direction of opening

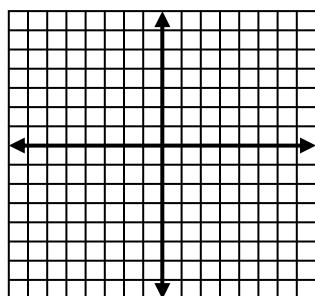

2.  $x = y^2 + 3$

x | y

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) “a” value
- f) direction of opening

3.  $y + 4 = 3(x - 1)^2$

x | y

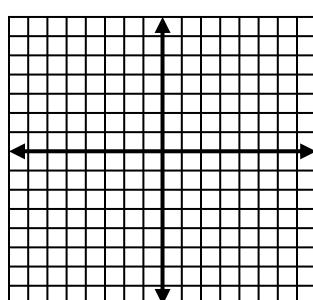

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) “a” value
- f) direction of opening

Not everything is in standard form, complete the square if necessary to put it into standard form.

4.  $y^2 - 8x = 0$

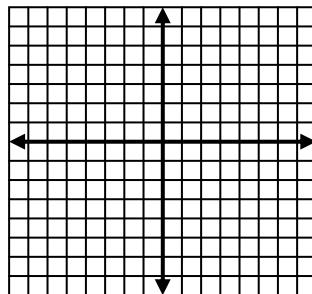

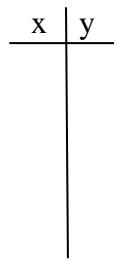

Standard form:

x | y

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) “a” value
- f) direction of opening

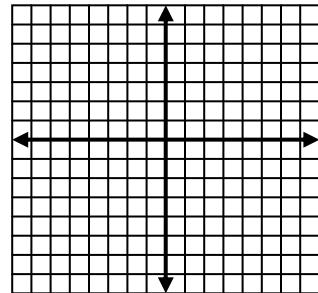

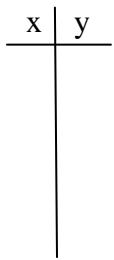

5.  $y^2 - 8y + 8x = -16$

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) "a" value
- f) direction of opening

Standard form:

6.  $2x^2 - y + 20x = -53$

- a) the vertex( , )
- b) the axis of symmetry
- c) domain
- d) range
- e) "a" value
- f) direction of opening

Standard form:

**Put in standard form only.**

7.  $x^2 - 8x - y + 19 = 0$

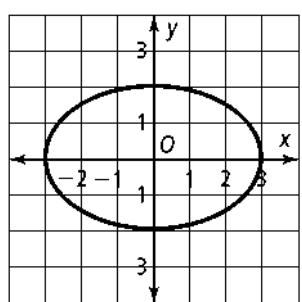

8.  $y^2 - 2x - 4y + 10 = 0$

Standard form:

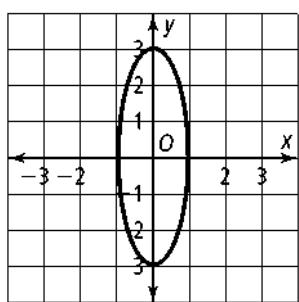

Standard form:

**Write the equation for each ellipse.**

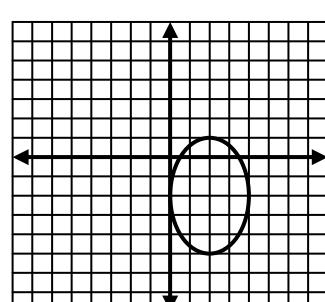

9.

10.

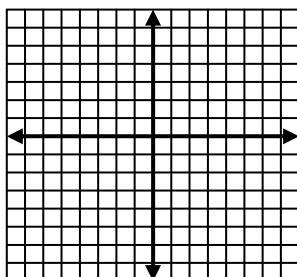

11.

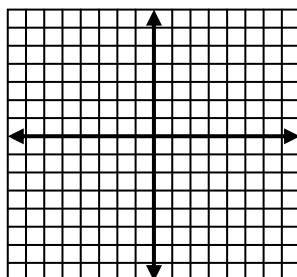

**Put equation into standard form and find the vertices of the ellipse. Use the graph if necessary.**

12.  $16x^2 + 25y^2 = 1600$

13.  $3x^2 + 6x + y^2 - 6y + 3 = 0$

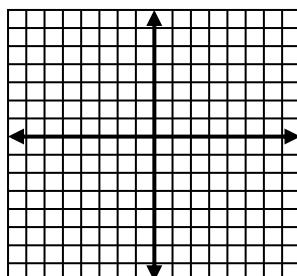

Standard form: \_\_\_\_\_
