

AP Calculus AB Summer work:

Dear AB Calc student,

This year we are having summer work for AP Calculus AB. I am doing this to try to get a few more review days to give you this year during the first semester. This decision is based on several years of input from previous students. The summer material is Chapter 1 in the textbook. You will need to check out a textbook from me prior to the last week of school. I am in N-6.

Chapter 1 is considered a review of Advanced Pre-Calculus. I used to begin the course with this chapter and it took 2 weeks to teach, and the test was on the following block day. This year, I am making it summer work.

- I recommend that you start the assignments 2-3 weeks before school begins, depending on how fast you want to work through the material.
- You will also find a lesson video for each of the 5 sections that we do in Chapter 1 (1.1,1.2,1.3,1.5 & 1.6 we do not do 1.4)
- I will do a 1 hour optional help session on Wednesday before school begins in N-6 from 9-10 am.
- **The packet of Chapter 1 work is due on the first day of school.**
- Once school begins in August, we will have 2 review days
- **The Chapter 1 test will be on the first block day of the first week of school.**

Please put the effort into this chapter so that you start off the year on a good foot.
